

The problem user gets pop-ups when logging into VR Faces, seems to happen when the user does not have "intranet.state.sd.us" added to their "Trusted Sites". To get this added, the user needs to open the Internet, go to "Tools", go to "Internet Options", click on "Trusted Sites", and then click on the button "Sites". When the "Trusted Sites" pop up comes up, add <http://intranet.state.sd.us>. MAKE SURE THE CHECK BOX "Require server verification..." IS UNCHECKED. The user should be able to get in after they do this.
